School based outreach-Increased dental van utilization

Sick Days.....YES dentists and hygienists get sick too.

Dental Director appointments

Productivity increase

Nursing homes

1. Mobile Unit

Choose one approach to Start. We started with hygiene visits on kids at local schools.

→ **Easier treatment plans**

Kids rarely have difficult plans that take a time consuming exam discussion.

→ **Increased hygiene efficiency**

Give hygienists a green light to do what they are already capable of doing.
Reduced number of people on the van.

→ **Production increase**

Allows a minimum of 8 appointments that would have been postponed otherwise. With kids it is normally 12 to 14.

Intra oral camera
Traditional photos
3D scanner

Cloud based EMR

Most already have the software needed to perform these visits.

Intraoral cameras are fairly inexpensive and have multiple benefits

FMX with photos are easily reviewed for a high quality exam and easily viewed off site or at a later time.

Story for illustration purposes only

Tip

Sample a few visits with one of your most flexible dentists/hygienists

This will not work for all team members.

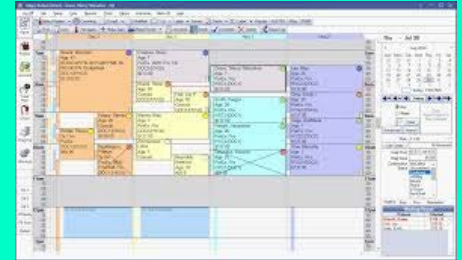

2. Adult visits

→ **Sick Days/Vacation/meetings**

Increased flexibility for your staff.
Every bit helps to decrease risk of
compassion fatigue and burnout

→ **Proper hygienist utilization**

Allows providers to be at two places at
once while also utilizing experienced
hygienists to their full potential. It will
also improve their skills within your
clinics.

Troubleshooting:

- Crown Margins

- Lingual class 5 preparation

- Pathology

- Cracks that we t

4. Nursing homes

Our next step will be nursing home care

→ **Transportation**

One of the top reasons we have issues reaching this population

→ **Proper health records**

we hope to increase rapport with the nursing home staff through these visits.
